1. Introduction  
 The purpose of this study is to investigate the impact of social media on the mental health of teenagers. The study aims to explore the relationship between social media usage and various mental health outcomes, such as anxiety, depression, and self-esteem. The research is based on a survey of 100 teenagers aged 13-18, who were asked to complete a questionnaire about their social media usage and mental health. The results of the study are presented in the following sections.
