$$f^{\text{opt}} = \min_{\mathbf{f} \in \mathcal{F}} \max_{\mathbf{g} \in \mathcal{G}} \mathbb{E}_{\mathbf{g} \sim \mathcal{G}} \mathbb{E}_{\mathbf{f} \sim \mathcal{F}} \left[ \sum_{i=1}^n \ell(\mathbf{f}_i, \mathbf{g}_i) \right] = \min_{\mathbf{f} \in \mathcal{F}} \max_{\mathbf{g} \in \mathcal{G}} \mathbb{E}_{\mathbf{g} \sim \mathcal{G}} \left[ \sum_{i=1}^n \ell(\mathbf{f}_i, \mathbf{g}_i) \right]$$

3. *Factorial ANOVA* is a statistical test that is used to compare the means of two or more groups. It is used to determine if there are any significant differences between the groups. The test is based on the F-distribution. The null hypothesis is that there are no significant differences between the groups. The alternative hypothesis is that there are significant differences between the groups. The test is used to determine if the differences are statistically significant.

Table 1. *Summary of the results of the 1997-1998 survey of the prevalence of *Salmonella* in the faeces of cattle and sheep in the north-east of Scotland. The prevalence of *Salmonella* was determined by the presence of *Salmonella* in the faecal sample (100%) or by the isolation of *Salmonella* from the faecal sample (100%)*

...the fact that the *in vitro* and *in vivo* results are in good agreement.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion. The number of people aged 65 and over is expected to increase from 200 million to 400 million. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion. The number of people aged 15 and over is expected to increase from 3.5 billion to 4.5 billion.

the  $\mathcal{H}^1$ -norm. The  $\mathcal{H}^1$ -norm is defined as follows:

$$\|u\|_{\mathcal{H}^1} = \left( \int_{\Omega} |\nabla u|^2 dx \right)^{1/2}.$$

The  $\mathcal{H}^1$ -norm is a norm on the space of functions  $u$  that are square-integrable and have square-integrable first derivatives. The  $\mathcal{H}^1$ -norm is a norm on the space of functions  $u$  that are square-integrable and have square-integrable first derivatives.

Let  $\mathcal{H}_1$  and  $\mathcal{H}_2$  be Hilbert spaces and let  $\mathcal{H} = \mathcal{H}_1 \oplus \mathcal{H}_2$ . Let  $T_1$  and  $T_2$  be bounded linear operators on  $\mathcal{H}_1$  and  $\mathcal{H}_2$  respectively. Let  $T$  be the operator on  $\mathcal{H}$  defined by  $T(x, y) = (T_1x, T_2y)$ . Prove that  $T$  is self-adjoint if and only if  $T_1$  and  $T_2$  are self-adjoint.
